

SolvAir's ends labour-intensive drying at Watershed Packaging with urgent solution.

Rapid System
Deployment

Manual Drying
Fully Eliminated

SolvAir's agile, and tailor-made solutions can swiftly address critical production needs for companies facing time-sensitive issues.

Problem

Watershed Packaging faced an urgent challenge with water-soaked energy drink cans after the steam sleeving process. Without an efficient drying system, employees had to manually wipe each can before packaging, significantly slowing production and jeopardising a crucial client contract.

Implication

Manual wiping requirements created a significant drag on Watershed's production speed and capacity. Escalating labour costs and reduced throughput threatened the company's ability to meet urgent deadlines, risking both current contracts and future business opportunities.

Solution

In just two weeks, SolvAir installed a AT700-7.5KW Blower System with precisely positioned Air Knives and Nozzles. This solution eliminated manual intervention, enabling Watershed to meet critical deadlines, reduce energy costs, and dramatically accelerate their packaging process.

Steve Hand

Sales Engineer
SolvAir UK

“ At SolvAir, we pride ourselves on agile problem-solving. The solution we implemented for Watershed Packaging in just two weeks highlights our capacity to meet urgent industry needs without compromising on quality or performance. ”
